

COVID-19 Deaths by Vaccination Status

Updated: June 28, 2022

This reports aims to show the levels of protection against deaths related to COVID-19 based on vaccination status. This report shows deaths by vaccination status starting August 2021 because additional/booster doses became available starting that time.

	Number	Rate (per 100,000)
Total Deaths from August 2021 to present	319	118.3
Unvaccinated	212	189.2
Fully Vaccinated without Booster	84	53.3
Fully Vaccinated with Booster	23	14.6

From August 2021 to present there have been 319 deaths. The cumulative incidence rate for the unvaccinated deaths is 189.2 per 100,000 unvaccinated persons, which is **3.6X** greater than the incidence rate of Fully Vaccinated without Booster deaths and **13.0X** greater than the incidence rate of Fully Vaccinated with Booster deaths.

Unvaccinated people have:

- **3.6X** Risk of Dying from COVID-19 compared to people fully vaccinated (with at least a primary series)
- **13.0X** Risk of Dying from COVID-19 compared to people fully vaccinated and boosted
